NEW! La Fraicheur champagne cooler

La Fraicheur "Grand Cru" Deluxe, "The different champagne cooler" is the jewel in the crown of anyone who appreciates a fine atmosphere, quality and an excellent glass of champagne or wine at the right temperature.

How it works:

Fill the cooler with ice cubes up to the top inside edge. After approximately 2 minutes, the cooler will be well and truly cold, due to the huge conduction of the aluminium. Place the grid on the top inside edge and the pre-chilled bottle on the grid. As a result, your wine will stay at the right temperature for more than two hours and the bottle will stay dry.

Added value:

During your meal, the condensation water will stay in the grooves, which makes the cooler look particularly attractive and romantic, especially in candlelight. After some time, several drips will start to form and will be caught by the base (condensation drain). The table will stay dry, partly due to the recess on the underside of the base (air stream). The La Fraicheur champagne cooler is an asset on the table due to its compact design and unique functionality. Seeing the label is a treat for the eye and is valued hugely by both guests and champagne or wine suppliers alike.
